

## UTM:RPM - Remote Patient Monitoring - medical staff overview -

YouThisMe (UTM) builds easy-to-use HIPAA compliant communications systems for healthcare. An important component is our Remote Patient Monitoring system. UTM:RPM enables patients to take their vitals at home and communicate the readings to their clinicians. Patients take a more active role in regularly monitoring their health, and clinicians receive more frequent updates on critical values, such as weight, blood pressure, blood oxygen and others. UTM:RPM alerts clinicians when any value exceeds the boundaries established for each patient. Medical staff can intervene earlier and keep the patient at home, healthier.
